Study sample

A series of patients with colorectal liver metastases

- ★ Group 1 – hepatectomy patients with no known evidence of extra hepatic disease before surgical resection
- ★ Group 2- palliative patients with liver metastasis from colorectal cancer undergoing treatment aimed at palliation (systemic or intrahepatic chemotherapy or locally ablative treatments).

Recruitment

- ✦ Study opened April 2004
- ✦ Sample size 265 patients
 - 125 Group 1 (hepatectomy)
 - 140 Group 2 (palliative treatment)

Total recruitment

	Group 1	Group 2	Total
UK Basingstoke	190	2	192
UK Bristol	9	48	57
France	6	8	14
Germany	0	12	12
Total	205	70	275
